YORD has pulled together a range of products which we think represents the best offerings to the market. We manufacture high-performance timber windows and doors but we can also replicate products to match your existing, should you wish to safeguard the character of your property or have a need to blend a new property seamlessly into any established area. For the same reasons, we also produce steel framed windows, doors. Steel windows with their minimal sight-lines are heavily associated with both the Art Deco and Modernist movements of the early 20th Century but their minimalist lines can fit well in many architectural styles.

However, it would not be possible for us to meet the needs of every project with only our own products, so we have sourced what we consider to be the finest products from Europe's leading manufacturers in order to satisfy both the design and technical requirements of even the most demanding architectural concepts. We offer a number of timber/aluminium composites and aluminium frames windows and doors with almost endless design possibilities. This enables us to offer frameless sliding systems, corner sliding or folding door ranges to match with the windows.

We always work closely with architects, contractors and homeowners to ensure the very best result for each project so, for this reason, we ask that you involve us as early in your project as possible, so we can assist with choosing the correct product, help design the installation detail and undertake the installation. All of which in order to provide accountability and give our clients piece of mind.

The traditional sash window is one of the most elegant and attractive window styles available, and can enhance any home. Our range of designs allow you to add or enhance a classic period feel to a room, while enjoying all the benefits of a modern window, such as noise reduction, low maintenance, safety and security and energy efficiency. Superbly engineered and of exceptional quality, our sash windows are available in softwood and hardwood. They will add real value and style to your home without sacrificing performance.

Rubust, low maintenance and elegant, our steel products will help create brighter interiors to any home.

ALUMINIUM RANGE

WINDOWS

CURTAIN WALLS

SLIDING DOORS

ENTRANCE DOORS

Our mission is to support architects and planners to design windows and doors with distinctive visual qualities.

BI FOLDING DOORS

SEAMLESS SLIDING DOORS

A perfect solution for seamless transparency with designed minimal intrusion of frame and glass. The possibility of sash meetings at a 90° corner without a mullion and meeting rail as thin as 20mm.

VISION range

SLIMLINE ALUMINIUM SLIDING DOORS

An avant-garde design of a thermally broken sliding system that permits maximum luminosity with the minimum amount of seen aluminium profile section. An elegance in design that looks to cover great light spaces with minimum frame fragments. Possibility of sash meetings at a 90° corner without a mullion and meeting rail as thin as 20mm.

Technical data:

- $U_w=0,9W/m^2K$
- Acoustic insulation up to 43dB
- Max panel size 4m x 4m
- Max weight up to 700kg for one panel (with automatic opener)

ARTLINE

This is where art has its purpose – quality. Its design implies a conscious effort to create an art object that is both functionally and aesthetically pleasing.

The impression of extreme simplicity and lightness of ARTLINE is a result of combined action between glass, elegant lighting and careful architectural consideration of space where LIGHT IS MORE. Sophisticated minimalist design creates a light and fluid appearance.

Functionality and technology

With an impressive potential height of, up to 3 meters and minimal frame width it allows building interiors to be flooded with light. ARTLINE has state of the art technology includes optimal thermal (0,85W/m²K) and acoustic insulation, high weather resistance and security solutions. Whole system transparency is impressive 98%.

COMPOSITE WINDOWS & DOORS

COMPOSITE UPVC/ALU WINDOWS

Aluminium is a uniquely elegant window material. It offers optimum weather protection, high stability, ease of care and an almost unlimited range of colour options. On the other hand, plastic delivers optimum heat insulation and noise protection, and high functional reliability. With AluClip Pro, you get both aluminium and plastic in one innovative system.

The AluClip Pro has an aluminium profile connected to a plastic profile. The aluminium performs the static function so no steel reinforcement is necessary inside the window sash. That further improves the already good heat insulation properties.

AluClipPro passive

AluClipPro

COMPOSITE TIMBER/ALU WINDOWS AND DOORS

Timber windows and doors can look beautiful. They also have a long service life and are easy to clean and maintain. Exposure of external surfaces to weather conditions means that they usually need to be repainted after a few years. That's where aluminium can help. By using products with an all-timber sash and frame, but with external aluminium cladding, you get the best of both worlds – the look and feel of timber, but full protection against the effects of weather. This means that you don't have to paint the outside of your windows or doors during the life of the products.

Our range of timber/alu windows and doors are made (internally) from engineered timber which gives the frames a high insulation level as well as the ability to be stained or lacquered so the natural beauty of the timber can be appreciated.

We offer a wide range of styles and colours, including a dual colour option.
